

Modular construction

The modular construction of the GFL 6-2 ensures that it can easily be used for almost any task. Ask your contact person about the possibilities.

Folding support

Because the supports are foldable, they do not get in the way during work. These supports are also held in place with a safety pin to prevent them from unfolding during work.

GFL 6-2

Forklift attachment

Versatile

Turn your forklift truck into a small loader crane with the GFL 6-2. With this attachment on your forklift truck you can mount a wide variety of attachments such as a lifting hook, open shell grab, orange peel grab, etc.

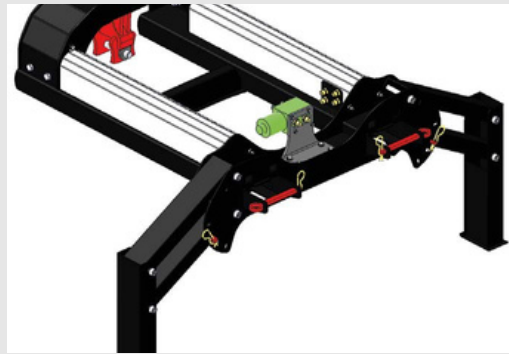

Safety

Use the safety pins to secure the GFL 6-2 to the forks of your forklift truck so that it cannot slide.

The supports

The supports ensure that you can easily put your GFL 6-2 aside when you are not using it and easily connect it to your forklift truck when you want to use it.

Strong

The GFL6-2 is strong and can be mounted on forklift trucks from 2T. The GFL 6-2, without attachment, weighs 160 Kg and is capable of displacing up to 0.6T. However, the exact weight depends on your forklift and the attachment you have installed.

Optional 24 volt solenoid valve

With this valve you can mount a rotator between your work tool and the GFL 6-2 so that you can not only grab and hoist but also rotate.

Optional rotator

It is possible to fit a rotator to allow you to rotate the attachment fitted to your GFL 6-2.

Raised coupling

The raised coupling bridge ensures that you hardly lose any height when mounting a rotator.
